PROFESSIONAL SUMMARY

Motivated second-year engineering student in Computer Science (data science) with a strong interest in AI, programming, and AI-driven technologies. Skilled in Python, C, and C++ with hands-on experience in Arduino projects, foundational data analysis tools, and national-level hackathons. Passionate about building intelligent solutions and continuously learning emerging technologies. Eager to contribute to a dynamic team and support research and development efforts.

EDUCATION

Bachelor of Engineering in Computer Science (data science) 2025-2029 A.P. Shah Institute of Technology

- Relevant Coursework: Data Structures, Programming in C/C++, Basic Data Analysis, Agentic AI System Logic, and Responsible AI

TECHNICAL SKILLS

- **Languages:** Python, C, C++ ,html,css,javascript
- **Libraries and Tools:** Pandas, NumPy, Power BI, VS Code, Git, Arduino Uno
- **Core Concepts:** Data Structures & Algorithms, Data Analysis, Problem Solving, Agentic AI Logic

HACKATHON & PROJECTS

LandGuard NER — Smart India Hackathon (SIH) 2026

AI-based landslide susceptibility and early-warning system using GIS, satellite data, rainfall, soil and terrain information to identify high-risk areas and support disaster response.

ExplainAI — IDEATHON 2026

Explainable AI solution for banking, insurance and healthcare, designed to make AI decisions easier for customers, organizations and regulators to understand.

RecoveryRehab — GenAI Hackathon

GenAI-powered healthcare support platform that provides personalized recovery guidance, physiotherapy recommendations, medicine reminders and injury-related assistance from medical information.

Crisis Response Platform – HACKSTREAK 3.0 (2026)

Team VibeX (team of 4) – Concept, system design and presentation

- Designed a web platform concept that connects citizens, volunteers and agencies on one live map for incident reporting, resource tracking and coordinated response.
- Planned the technical approach: React, FastAPI, PostgreSQL/PostGIS and WebSockets, with scikit-learn for severity scoring and duplicate-report clustering.
- Prepared the round presentation covering problem, solution, architecture, features, feasibility and impact.

Distance Measurement System using Arduino Uno

First Year Project

- Developed a real-time distance measurement system using ultrasonic sensors and Arduino Uno.
- Implemented logic in C/C++ using the time-of-flight principle to achieve reliable distance readings.
- Integrated the system for use in obstacle detection and smart sensing applications.

Agentic AI Logic & Responsible AI Framework

Self-Initiated Research

- Designed a logic framework for agentic AI systems, focusing on inputs, decision logic, and learning loops.
- Established a data-driven framework centered on the sequence of "Data -> insights -> impact."

CERTIFICATIONS

- AI-Powered Data Analytics Job Simulation – Forage
- Fundamentals of Data Structures in C – Simplilearn

- Engineer AI Agents with ADK (Agent Development Kit) – Google Skill Badge
- Create Your Gemini Enterprise Application – Google Skill Badge
- GenAI Explorer – Crio.Do • Claude 101 – Anthropic
- Introduction to Data Science – Cisco Networking Academy
- Power BI for Beginners – Microsoft & Simplilearn

STRENGTHS AND INTERESTS

- **Strong Analytical Skills:** Proactive attitude toward acquiring new concepts and solving complex logic problems.
- **AI & Data Science:** Deep interest in emerging technologies and real-world tech applications.
- **Teamwork:** Collaborated in national-level hackathons: Nakshatra, Hackathon 1.0 and HACKSTREAK 3.0.
- **Creative Design:** Sustained interest in retro visual aesthetics and professional-grade media editing.
